OpenRefine Setup (Pre-Workshop)

1. Sign in to the desktop computer (if you want to use your own device, you may)
2. Go to your BYU email account and find the email sharing the **GitHub** page with you
3. Open that folder through the link and navigate to the **OpenRefine Workshop** folder
4. Download the files titled **census_and_trends_df.csv, openrefine_custering_practice_space_df.csv,** and **star_wars_openrefine_df.csv**
5. If using your own device, go to openrefine.org and download the software
6. Go to your OpenRefine folder (from downloading the application) and double-click on the one that says OpenRefine, right below Licenses.
7. You are ready to start!

Troubleshooting Tips (Mid-Workshop)

1. If downloading and using OpenRefine on a Windows computer, you may encounter an error opening it.
2. In the error, there is an option with something like “More Info.” Click on this.
3. Then, click the bottom-right button that tells you to open the application anyway.
